1 Regarding this Document

1.1 Using this document

The operating manual contains important information to the entire life cycle of SBU.

The operating manual is a component of the product.

- Keep the manual in a safe place throughout the life of SBU.
- Pass the manual on to the next owner or user of the equipment.
- Ensure that any amendments received are inserted in the manual.
- The images shown are only examples. Menus or functions may be shown that are not available in the specific product or will be introduced at a later time only.

1.2 Copyright

This operator manual is copyright protected. Queries regarding use or duplication of the documentation should be referred to KAESER. Correct use of information will be fully supported.

1.3 Licensed brands and trademarks

All licensed brands and trademarks and brands and trademarks licensed to third parties mentioned in this service manual are subject without restriction to the legislation for the brand and trademark rights concerned and the ownership rights of the licensed owner in each case. The mere mention of a trademark alone does not allow the conclusion to be drawn that a trademark is not protected by the rights of a third party.

1.4 Symbols and labels

- Please note the symbols and labels used in this document.

1.4.1 Warnings

Warning notices indicate dangers that may result in injury when disregarded.

Warning notices indicate three levels of danger identified by the corresponding signal word:

Signal term	Meaning	Consequences of ignoring the warning
DANGER	Warns of an imminent danger	Will result in death or severe injury
WARNING	Warns of a potentially imminent danger	May result in death or severe injury
CAUTION	Warns of a potentially dangerous situation	May result in a moderate physical injury

Tab. 1 Danger levels and their definitions (personal injury)

Warning notices preceding a chapter apply to the entire chapter, including all sub-sections.

Example:

1 Regarding this Document

1.4 Symbols and labels

DANGER

These show the kind of danger and its source.

The possible consequences of ignoring a warning are shown here.

If you ignore the warning notice, the "WARNING" signal word indicates a lethal or severe injury will occur.

> The measures required to protect yourself from danger are shown here.

Warning notes referring to a sub-section or the subsequent action are integrated into the procedure and numbered as an action.

Example:

1. **A WARNING** *These show the kind of danger and its source.*
The possible consequences of ignoring a warning are shown here.
If you ignore the warning notice, the "WARNING" signal word indicates that a lethal or severe injury may occur.
> The measures required to protect yourself from danger are shown here.
2. Always read and comply with warning instructions.

1.4.2 Potential damage warnings

Unlike the warnings shown above, damage warnings do not indicate a potential personal injury.

Warning notices for damages are identified by their signal term.

Signal term	Meaning	Consequences of ignoring the warning
NOTE	Warns of a potentially dangerous situation	Damage to property is possible

Tab. 2 Danger levels and their definition (damage to property)

Example:

NOTICE

These show the kind of danger and its source.

Potential effects when ignoring the warning are indicated here.

> The protective measures against the damages are shown here.

> Carefully read and fully comply with warnings against damages.

1.4.3 Other alerts and their symbols

This symbol identifies particularly important information.

Material Here you will find details on special tools, operating materials, or spare parts.

Precondition Here you will find conditional requirements necessary to carry out the task.

The conditions relevant to safety shown here will help you to avoid dangerous situations.

> This symbol denotes lists of actions comprising one stage of a task.

1. Instructions with several steps are numbered in the sequence of the operating steps.

Information referring to potential problems is identified by a question mark.

The cause is named in the help text ...

➤ ... as is a solution.

This symbol identifies important information or measures concerning environmental protection.

Further information Further topics are introduced here.

2 Technical Data

2.1 System data

► Enter the system data of this product in the following table.

System data	Value
Part number	
Serial number	

Tab. 3 System data

The part number and serial number is provided on the nameplate.

2.2 Electrical Data

Model	SBU 400 — 100-240 V AC	SBU 400 — 24 V DC
Rated voltage [V]	100–240, 50–60 Hz	24
Rated current [A]	1.25–0.65	2.5
User's fusing [A]	10/13/16	Max. 4
Power cable core cross-section [AWG]		3x AWG 14

Tab. 4 Electrical Data

2.3 Versions and Options

2.3.1 SBU for wall mounting

Scope of supply: Sheet-steel control cabinet, complete, without plug for the on-site bus wiring.

Description	Part number	DI (24 VDC)	DO (24 VDC 0.5A)	Relay at DO	AI (0-20mA, p/a)	AO (0-20 mA)	AIR (PT100)	DII (Impulse)	SNW ports RJ45 / FOC	DP master	Isolating amplifiers	Relay signal duplication	Ethernet extender

Tab. 5 SBU types for wall mounting

2.4 Components within the control cabinet

2.4.1 I/O-Modules (SIGMA AIR MANAGER 4.0 and SBU)

The following technical data apply to the I/O block and the individual I/O modules used in SIGMA AIR MANAGER 4.0 and SBU:

- I/O block 6DI&6DOT&4AI
- Module 6DI – X20DI6371
- Module 6DOT – X20DO6322
- Module 4AI – X20AI4632-1

Technical data, all I/O modules

Feature	Value
Connection terminals	Push-in terminal
Connection cross-section	Copper wires
<ul style="list-style-type: none"> ■ Wire/single-core [AWG] ■ Flex/fine-core [AWG] ■ Wire end ferrule [AWG] ■ Double wire-end ferrule [AWG] 	<ul style="list-style-type: none"> ■ AWG 28-14 ■ AWG 24-14 ■ AWG 24-16 ■ 2x AWG 24-18
Display elements	Status LEDs

Tab. 6 Technical data, all I/O modules

Technical data, I/O-block and individual modules

Feature	Value
Bus Controller	X20BC0087-C01
Bus	KAESER SIGMA NETWORK
Transfer rate [MBit/s]	10/100
Characteristics	Auto crossing (Auto-MDI(X)), Auto negotiation
Connections	2 x -socket RJ45: SIGMA NETWORK, RJ45, 10/100Base-TX

2 Technical Data

2.4 Components within the control cabinet

Feature	Value
Bus Controller	X20BC0087-C01
Max. length of the line between SIGMA NETWORK two components [ft.]	328
Potential isolation SIGMA NETWORK I/O-module	Yes
24 V DC power supply	X20PS9400
Power supply [V DC], [A]	24 (-15% / +20%), max. 0.7
Potential isolation	—
<ul style="list-style-type: none"> ■ Supply - internal bus ■ Supply - I/O module 	<ul style="list-style-type: none"> ■ Yes ■ No
Digital inputs (DI)	Module 6DI – X20DI6371
Input voltage [V DC]	24
Model Input current at 24 V DC [mA]	3.75
Switching threshold [V DC]	Low <5 , High >15
Insulation voltage between channel and bus [V_{eff}]	500
Digital outputs (DOT)	Module 6DOT – X20DO6322
Output voltage [V DC]	24
Output current per output maximum (high voltage and short-circuit proof) [A]	0.5
Output protection	Thermal shut-down at high voltage or short-circuit, integrated protection for switching inductive loads
Insulation voltage between channel and bus [V_{eff}]	500
Analogue Inputs (All)	Module 4All – X20AI4632-1
Measuring range [mA]	0-20
Resolution [bit]	15
Connection type	Active and passive possible (2 conductor and 4 conductor technology)
Ohmic resistance (internal) [Ohm]	< 400
Input protection	Protection against supply voltage wiring
Maximum error in 25°C range from current measured value [%]	0.08
Maximum error in 25°C - offset from final value of measuring range [%]	0.02
Distribution 24 VDC	Module 6x 24 VDC - X20PD2113
Rated output voltage [V DC]	24
Output current, total [A]	6.0
Fusing (internal, replaceable) [A], [in.]	T6.3, 5x20mm (0.8 in.)

Tab. 7 Technical data, I/O-block and individual modules

2.4.2 I/O Modules (only SBU)

The following technical data apply to the individual I/O modules used only in SBU:

Feature	Value
Connection terminals	Push-in terminal
Connection cross-section	Copper wires
<ul style="list-style-type: none"> ■ Wire/single-core [AWG] ■ Flex/fine-core [AWG] ■ Wire end ferrule [AWG] ■ Double wire-end ferrule [AWG] 	<ul style="list-style-type: none"> ■ AWG 28-14 ■ AWG 24-14 ■ AWG 24-16 ■ 2x AWG 24-20
Display elements	Status LEDs

2.4.2.4 Module 2DII – X20DI2377

Feature	Value
Input voltage [VDC]	24
Typical input current at 24 VDC [mA]	10.5
Event counter signal form	Rectangular pulse
Event counter evaluation	Each positive side
Event counter input frequency [kHz]	max. 50
Switching threshold [VDC]	Low <5 , High >15
Insulation voltage between channel and bus [V _{eff}]	500

Tab. 12 Data module 2DII

2.4.3 Relay block

The relay block comprises 5 relays (SIGMA AIR MANAGER 4.0) or 6 relays (SBU) with the following technical data:

Feature	Value
Connection terminals	Push-in terminal Screw terminal

2 Technical Data

2.4 Components within the control cabinet

Feature	Value	
Connection cross-section	Copper wires	Copper wires
■ Wire/single-core [AWG]	■ 0.14-1.5 / AWG 24-16	■ 0.5-4 / AWG 20-12
■ Flex/fine-core [AWG]	■ 0.14-1.5 / AWG 24-16	■ 0.5-2.5 / AWG 20-14
■ Wire -end ferrule [AWG]	■ 0.14-1.5 / AWG 24-16	■ 0.5-1.5 / AWG 20-16
■ Double wire ferrule	■ not possible	■ 0.5-1.0
Stripping length [in.]	0.3	0.3
Tightening torque	—	0.5–0.6 Nm / 4.4–5.3 lb-in
Display elements	Status LED	
Coil voltage [V DC]	24	
Output contact	1 changeover contact	
■ Max. switching voltage [V AC/DC]	■ 250	
■ Min. switching voltage [V AC/DC]	■ 5 (at 100 mA)	
■ Min. switching current [mA]	■ 10 (at 12 V)	
■ Max. continuous current [A]	■ 6	
■ Switching capacity IEC 60947 / DIN VDE 0660 24 V DC13 [A]	■ —	
230 V AC15 [A]	1	
230 V AC15 [A]	3	
Inductive loads (e.g. auxiliary contactor, solenoid valve)	to be connected with RC element	
Rated isolation voltage [V AC]	250	

Tab. 13 Relay block data

2.4.4 Switch 8 port

Feature	Value
Ports RJ45: SIGMA NETWORK	8
Transfer rate [Mbps]	10/100
Transfer mode	Store-and-forward switching mode
Characteristics	Auto crossing (Auto-MDI(X)), Auto negotiation, Auto sensing
Connections	RJ45, 10/100Base-TX
Max. length of the line between SIGMA NETWORK two components [ft.]	328
Power supply [VDC]	9–48, @ 24 V DC/200 mA
Display elements	Status LEDs for voltage and every port

Tab. 14 Switch 8 port

2 Technical Data

2.4 Components within the control cabinet

2.4.5 SIGMA NETWORK Switch 4-port RJ45 – 1-port FOC

Feature	Value
Port RJ45: SIGMA NETWORK	4
Transfer rate [Mbps]	10/100
Characteristics	Auto crossing (Auto-MDI(X)), Auto negotiation, Auto sensing
Connections	RJ45, 10/100Base-TX
Max. length of the line between SIGMA NETWORK two components [ft.]	328
Ports: FOC ¹⁾ : SIGMA NETWORK	1
Transfer rate [Mbps]	100
Fibre type	Multi-mode
Cable dimensions, core/cladding	62.5/125 µm
Wavelength	1270 – 1360 nm
Connections	2x ST (BFOC), 100Base-FX
Max. conductor length between two FOC components [ft.]	9842
Transfer mode	Store-and-forward switching mode
Power supply [V DC]	9-30, @ 24 V DC/300 mA
Display elements	Status LEDs for voltage and every port

3 Safety and Responsibility

3.1 Basic instructions

⚠ DANGER

Disregarding these instructions can result in serious injury.

- *To safely operate this product, carefully read the operating manual and take notice of its contents.*

The product SBU is manufactured to the latest engineering standards and acknowledged safety regulations. Nevertheless, dangers can arise through its operation:

- Danger to life and limb of the operator or third parties,
 - impairments to the SBU and other material assets.
- Therefore, observe the following:
- Use the product SBU only if it is in a technically perfect condition and only for the purpose for which it is intended; observe all safety measures and the instructions in the service manual.
 - In particular, immediately rectify (have rectified) any faults that could be detrimental to safety.

3.2 Specified use

Specified use also includes compliance with the instructions in this manual.

The SBU is intended solely for the operation of compressors, blowers and vacuum systems in industrial fields in conjunction with SIGMA AIR MANAGER 4.0. Any other use is considered incorrect. The manufacturer is not liable for any damages that may result from incorrect use. The user alone is liable for any risks incurred.

- Adhere to the specifications given in these operating instructions and the operating manual for SIGMA AIR MANAGER 4.0.
- Operate the product only within its performance limits and under the permitted ambient conditions.

3.3 Improper use

Specified use also includes compliance with the instructions in this manual.

Converting or changing the SBU constitutes improper use. The manufacturer's warranty is made invalid in such cases.

Improper usage can cause damage to property and/or (severe) injuries.

- Use SBU only as intended.
- Do not use SBU to control other machines or products for which SBU is not intended.
- Do not allow conversions or changes.

3.4 User's responsibilities

3.4.1 Observe statutory and universally accepted regulations

- Observe relevant statutory and accepted regulations during installation, operation and maintenance of the control cabinet and its components.

3.4.2 User's Responsibilities

These are people who, by virtue of their training, knowledge and experience as well as their knowledge of relevant regulations can assess the work to be done and recognize the possible dangers involved.

Authorized operators possess the following qualifications:

- are of legal age,
- are familiar with and adhere to the safety instructions and sections of the service manual relevant to operation,
- have received adequate training and authorization to operate electrical and compressed air devices,

Authorized installation and maintenance personnel have the following qualifications:

- are of legal age,
- are familiar with and adhere to the safety instructions and sections of the service manual applicable to installation and maintenance,
- are completely familiar with the safety concepts and regulations of electrical and compressed air engineering,
- are able to recognize the possible dangers of electrical and compressed air devices and take appropriate measures to safeguard persons and property,
- have received adequate training in and authorization for the safe installation and maintenance on this equipment.

- Ensure that operating, installation and maintenance personnel are qualified and authorized to carry out their tasks.

3.5 Dangers

The general safety instructions in this chapter describe possible dangers and how to deal with them. Special safety instructions are found in this service manual at the beginning of each chapter or directly before a task instruction.

- Take full heed of all safety instructions.

3.5.1 Safely dealing with sources of danger

Electricity

- Disconnect the machine from all power supply phases.
- Switch off any external power sources.

External voltage is still present on the marked terminals (orange or labelled) in the SBU when the power supply is switched off.

3 Safety and Responsibility

3.6 Warranty

- Check and ensure that no voltage is present.
- Before switching on again make sure that
 - no maintenance personnel are working on the machine,
 - all panels are in place,
 - all access doors are closed.
- Allow only qualified electricians or trained personnel under the supervision of a qualified electrician to carry out work on electrical equipment according to electrical engineering regulations.
- Observe all accepted safety regulations and legislation applicable to all work carried out on the SBU.
- Use fuses corresponding to machine power (see chapter 2).
- Make electrical connections only with voltage removed and check regularly for tightness and condition.
- Use only electrical cables that are suitable and approved for the surroundings and electrical loads applied.
- Before every start-up of machines that are linked to the master controller, make sure there is adequate protection against electric shock from direct or indirect contact and check regularly.

3.5.2 Safe SBU operation

Pay attention to the following points to avoid damage to the SBU:

WARNING

A short circuit can cause irreversible damage to the PROFIBUS interface.

- *Avoid short circuits on the power supply pins in the PROFIBUS interface for PROFIBUS/SIGMA NETWORK converter.*

- Do not remove any plugs on the SBU while the compressed air system is in operation.
- Operate the SIGMA AIR MANAGER 4.0 only when all supplies are connected.
- Never modify, bypass or disable safety devices.
- Do not remove or obliterate labels and notices.
- Use only spare parts approved by the manufacturer for use in SBU.

3.6 Warranty

This service manual does not contain any independent warranty commitment. Our general terms and conditions apply with regard to warranty.

A condition of our warranty is the specified use of the master controller under observation of the specific operating conditions.

Due to the large number of possible applications, it is incumbent on the user to determine whether the master controller can be used for any specific application.

Furthermore, we accept no warranty obligation for:

- the use of unsuitable parts or operating materials,
- unauthorized modifications,
- incorrect maintenance,
- incorrect repair.

Correct maintenance and repair means the use of genuine Kaeser spare parts.

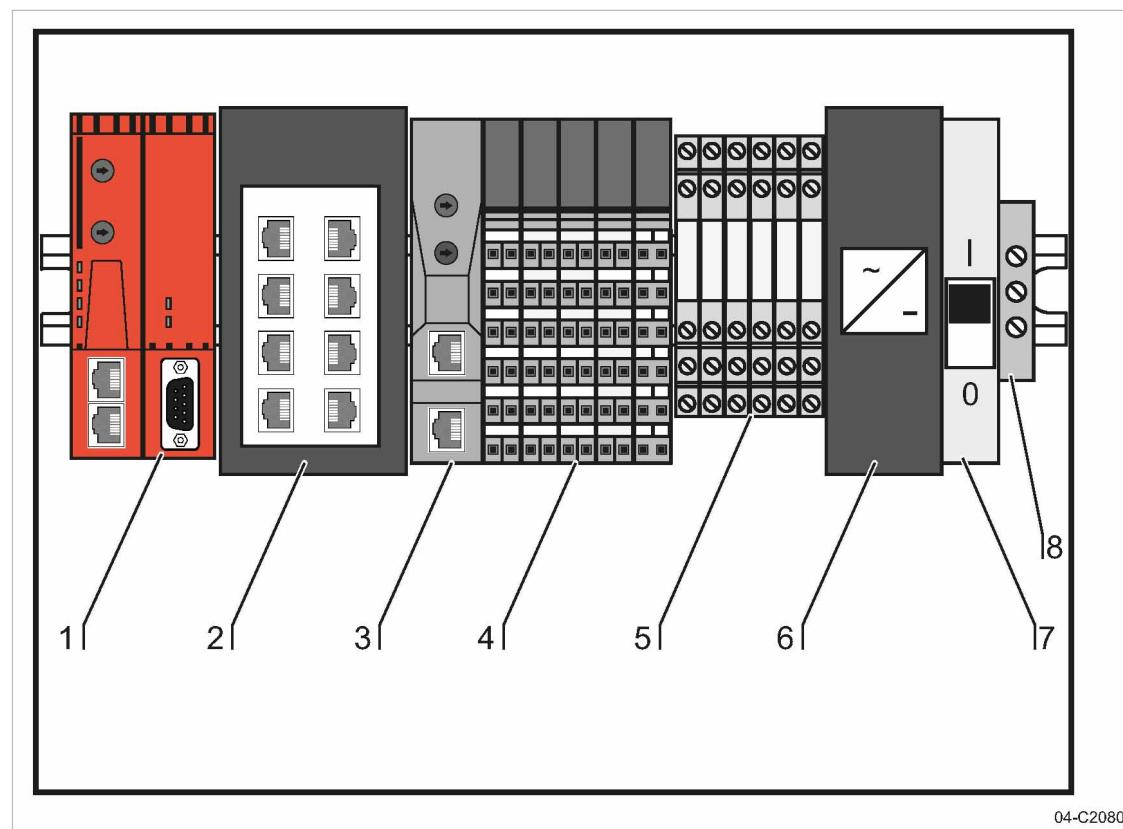

- Obtain confirmation from KAESER that your specific operating conditions are suitable.

4 Design and Function

4.1 Overview

The SBU (SIGMA NETWORK BUS CONVERTER) is an interface expansion for SIGMA AIR MANAGER 4.0. Use SIGMA NETWORK to connect SBU with SIGMA AIR MANAGER 4.0.

SBU is offered in different designs. They differ by the number of the factory-installed components.

04-C2080

Fig. 1 SBU – Example of possible components

- | | | | |
|---|-----------------------------|---|-------------------|
| ① | PROFIBUS master | ⑤ | Relay |
| ② | SIGMA NETWORK Switch 8 port | ⑥ | Power supply unit |
| ③ | I/O block: Bus controller | ⑦ | Safety cut-out |
| ④ | I/O block: I/O modules | ⑧ | Terminal |

4.2 Converter SBU200-1 DSL

The product "Converter SBU200-1 DSL" constitutes a control cabinet with integrated Ethernet extender. It allows broad-band Ethernet transmissions on existing 2- and 4-wire cables (with new installations screened twisted pair cables should be installed). Depending on the cable quality, ranges of few kilometers are possible. With it, e.g. an existing PROFIBUS line may still be used in order to establish a very long connection between two SBUs with DSL design/option.

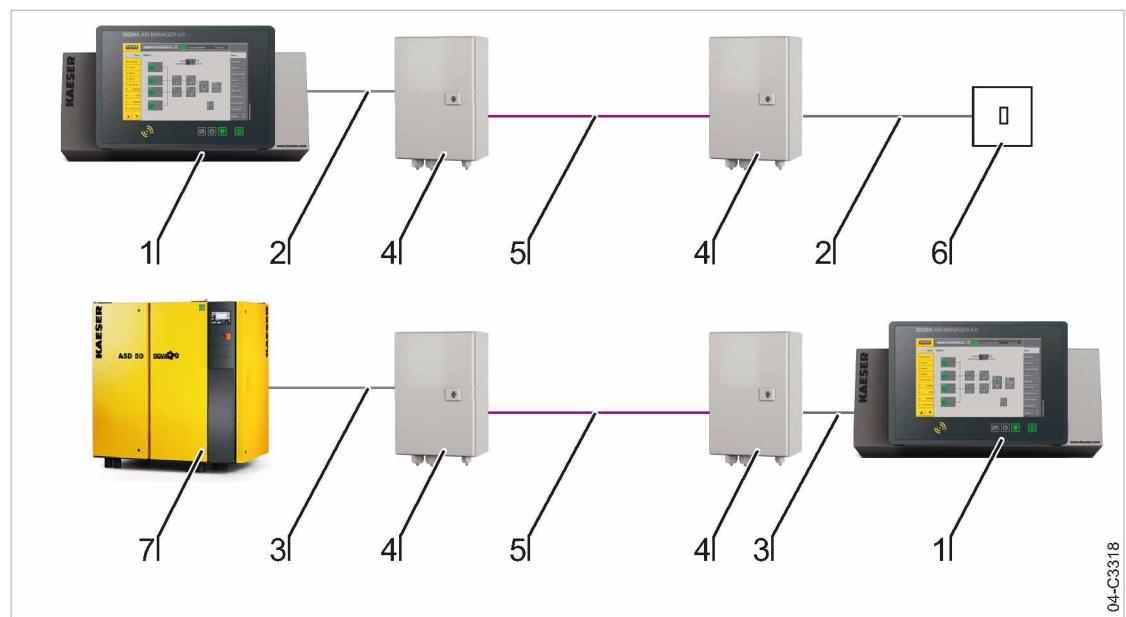

Fig. 2 Application examples with converter SBU200-1 DSL

5 Installation and Operating Conditions

5.1 Environment

Temperature range

Ambient temperatures	
Min. ambient temperature	Maximum ambient temperature
0 °C	45 °C

Tab. 19 Ambient temperatures

Storage temperatures	
Minimum storage temperature	Maximum storage temperature
-20°C	70°C

Tab. 20 Storage temperatures

Note permissible ambient temperatures:

1. Check ambient temperature.
2. Adjust equipment location to suitable ambient temperature range.

Note storage temperature:

1. Check temperature of storage location.
2. Adjust storage temperature to suitable range.

5.2 Installation conditions

The SBU can be operated in general environments or in industrial environments.

- Install SBU accordingly.

6 Installation

6.1 Ensuring safety

Follow the instructions below for safe installation.

Warning instructions are located before a potentially dangerous task.

Disregard of warning instructions can cause serious injuries!

Complying with safety warnings

Disregard of safety notes can cause unforeseeable dangers!

- Comply with the instructions in chapter 3 Safety and Responsibility.
- This product may only be installed by a qualified person. See chapter 3, "Assigning personnel".

When working on live components

Touching voltage carrying components can result in electric shocks, burns or death.

- Work on electrical equipment may only be carried out by authorized electricians.
- Switch off and lock out the power supply disconnecting device and check that no voltage is present.
- Check that there is no voltage on floating relay contacts.

6.2 Reporting transport damage

1. Check the master controller for visible and hidden transport damage.
2. Inform the carrier and the manufacturer in writing of any damage without delay.

6.3 Scope of delivery

This product comprises at least the following components:

Item	Material No.	Designation
10	—	SBU
20	—	Ferrit bushes
30	—	This instruction

Tab. 21 Standard scope of delivery

6.4 Installing the control cabinet

A solid, vibration-free and load-bearing wall is required for the control cabinet.

Pay attention to the following when fitting the control cabinet:

- The fixing materials must be compatible with the type of wall and the weight of the control cabinet (chapter 2 Technical Specification).
- The control cabinet must be fully accessible.
- Fully opening control cabinet door.
- A free escape route must be maintained (also with the control cabinet door fully open).
- Protection from direct sunlight, rain, splashed water or excessive dust build up must be provided.

► Properly mount the control cabinet at the wall. A template for the bore holes is provided in the annex (see chapter 12.1).

6.5 Identifying the machines

For details regarding the identification of the machines, please refer to the service manual for SIGMA AIR MANAGER 4.0, chapter Installation.

6.6 Planning the wiring

For details regarding the wiring and information about required accessories, please refer to the operating manual for SIGMA AIR MANAGER 4.0, chapter Installation.

For wiring between two SBU with DSL design/option see chapter 4.2

There are several methods of connecting the machines to SIGMA AIR MANAGER 4.0 or SBU:

- Using SIGMA NETWORK
(for machines with SIGMA CONTROL 2).
Prerequisite: A port is provided for every machine: SIGMA NETWORK in SIGMA AIR MANAGER 4.0 or SBU are available.
- PROFIBUS
(When replacing a SIGMA AIR MANAGER with SIGMA AIR MANAGER 4.0 or for machines with SIGMA CONTROL).
Prerequisite: The option PROFIBUS master is available in the SIGMA AIR MANAGER 4.0 or SBU.
- Using floating relay contacts
(for conventional machines without SIGMA CONTROL or SIGMA CONTROL 2).
Prerequisite: At least one I/O Port DOR is available in SIGMA AIR MANAGER 4.0 or SBU for each machine. We recommend one DOR I/O port and one DI I/O port for each machine.

6.6.1 Instructions on the electrical installation

- A power supply disconnecting device to EN 60204 must be installed by the user.
- Do not exceed the following maximal values for the cable lengths:

Type	Maximum cable length [ft.]	Remark
SIGMA NETWORK (copper DSL)	see chapter 6.6.2	Maximum conductor length between two SBU with DSL design or option

Type	Maximum cable length [ft.]	Remark
SIGMA NETWORK (copper Ethernet)	330	Maximum conductor length between two devices at the SIGMA NETWORK.
SIGMA NETWORK fibre-optic cable	9800	Maximum conductor length between two SBU with OLM design or option
Digital transistor outputs	100	
Digital relay outputs	330	
Digital inputs	100	
Analogue inputs	100	screened
PROFIBUS	2600	Maximum cable length of the entire PROFIBUS.

Tab. 22 Maximum cable lengths

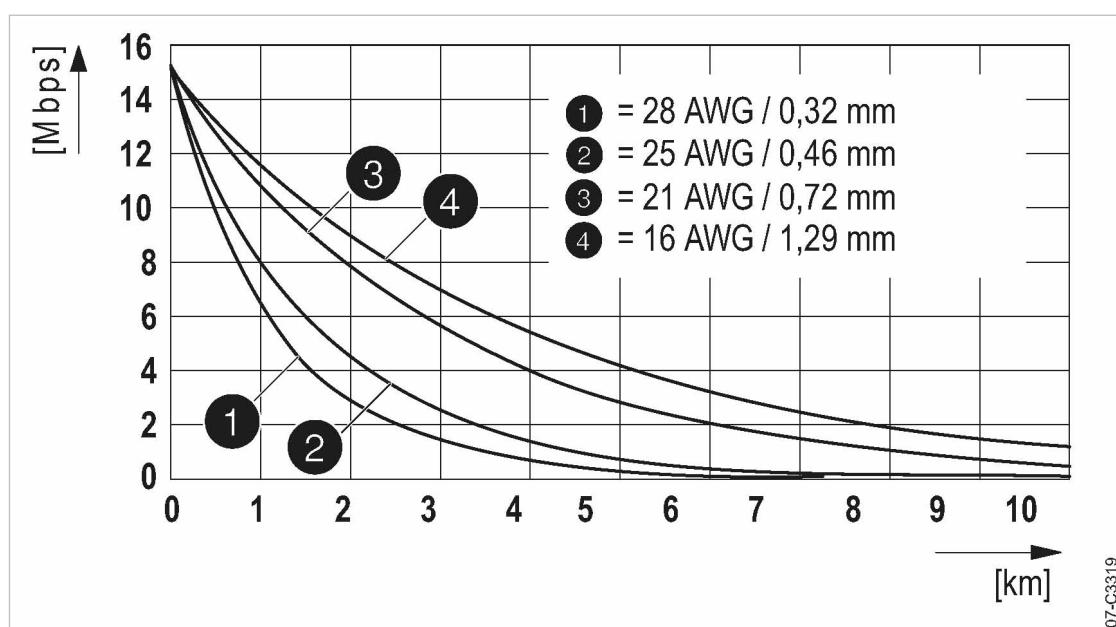

- Use galvanic isolation on cables laid outside the building to ensure lightning protection (preferably fiber optic cable).
- See the wiring diagrams in the annex for cable types, cross-sections and cable selection. Use flexible cables as far as is possible.
- This suppressor is suitable for inductive loads connected to the relay outputs.

6.6.2 Cable length with copper DSL

The maximum possible data rate on a copper DSL line depends on many parameters:

- Cable length
- Type of cable (diameter/cross-section, design, capacity, shielding)
- Installation (number of transitions, lines installed in parallel)
- Communication line interferences from EMC from neighboring subscribers

For the maximum possible cable length the two most important parameters are the cable cross-section and the data rate.

	Cross-section [mm ²]	Cross-section of AWG	diameter [mm]
①	0.08	28	0.32
②	0.16	25	0.46
③	0.41	21	0.72
④	1.31	16	1.29

Tab. 23 Legend for Fig. 3

With cables of a higher quality and cables with larger cross-sections greater ranges can be achieved. A 4-wire cable has twice the data rate of a 2-wire cable.

Ten SIGMA NETWORK components that are connected to SIGMA AIR MANAGER 4.0 via DSL require a data rate of approx. 1 Mbps (Mbit/s). Use figure 3 to estimate the maximum cable length between two SBU with DSL design/option.

Example: Typical PROFIBUS cable 1x2x0.64 mm² and ten SIGMA NETWORK components connected via DSL results in a maximum cable length of approx. 5 km.

Ultimately, an existing copper line for connecting SIGMA NETWORK components to a SIGMA AIR MANAGER 4.0 via DSL can only be determined by a test in practice. Usual PROFIBUS lines (1x2x0.64 shielded) from existing SIGMA AIR MANAGER installations, fully installed by a professional can be used up to 2600 ft without any problems.

6.7 Laying cables

DANGER

Contact with live electrical components can cause serious injury or death.

- De-energize SIGMA AIR MANAGER 4.0/SBU and external power sources.

1. Switch off all phases of SIGMA AIR MANAGER 4.0/SBU and external power sources.
2. Lock them out and tag them out.

6 Installation

6.8 Installing the RJ45 bus connector

3. Observe all accepted safety regulations and national legislation applicable to all work carried out on the SIGMA AIR MANAGER 4.0 / SBU.

4. Have SIGMA AIR MANAGER 4.0/SBU connected to the power supply by an authorized and qualified electrician to national legislation and the regulations of the electricity company concerned.

The terminals in SIGMA AIR MANAGER 4.0/SBU that could still be supplied by an external voltage source even when the voltage supply is shut-off are marked:

- Orange
- Label

5. Create the connections to the power supply, the individual machines and the components as detailed in the circuit diagrams.

Avoid signal distortion by using suitable wiring and screening.

- Ensure a minimum distance of 10 cm between conductors with voltages up to 24 V (digital inputs, analogue inputs, SIGMA NETWORK, PROFIBUS, and if applicable, relay outputs [only SIGMA AIR MANAGER 4.0: conductor to the Com-module and to the user-supplied LAN]) and power cables (voltages larger than 60 V).

SIGMA AIR MANAGER 4.0: The cable gland cover (Fig. 5, ⑧) is realized with pre-punched passage options (right, left and bottom) for laying the conductors. Attach cable ducts or harnesses so that you can utilize the break-throughs.

6.8 Installing the RJ45 bus connector

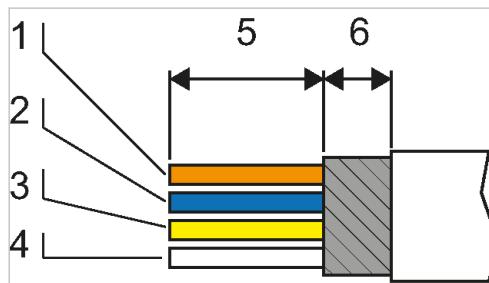

Material: Use a FastConnect stripper for industrial Ethernet FC cables (IE FC Stripping Tool) for easy stripping of the SIGMA NETWORK conductors and to improve the connection between the cable and the plug. An Ethernet cable stripping tool can be ordered from KAESER under the material number 8.8294.0.

To connect to SIGMA NETWORK, you must connect the network subscribers according to SIGMA NETWORK conductor.

- Feed the network cable to the SIGMA NETWORK devices on both sides through one EMC cable trench each.
- Use an RJ45 bus connector at both ends of the network cable.

6.8.1 Installing the RJ plug

06-C2073

Fig. 4 Strip the isolation from the network cable

① Orange

④ White

② Blue

⑤ 0.7 in.

③ Yellow

⑥ 0.2 in.

6 Installation

6.8 Installing the RJ45 bus connector

1. Stripping the network cable isolation (see Fig. 4).

The RJ45 plug and the network cable can be damaged if unlocked under strain.

- Always release strain on the RF45 plug prior to unlocking.

2. Spread the conductors according to the color coding of the contact element of the RJ45 connector (see Fig. 4).

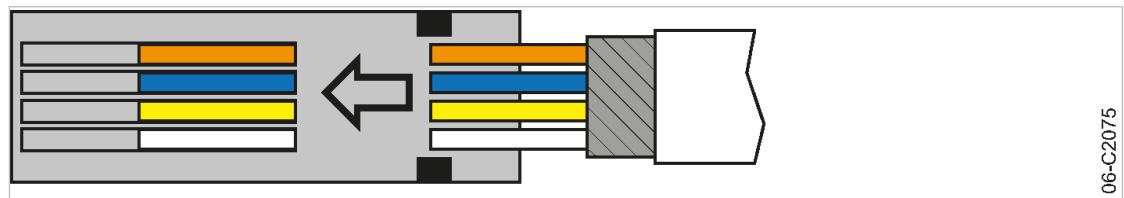

Fig. 5 Inserting the network cable conductors

3. Insert the conductors into the contact elements up to the end stop.

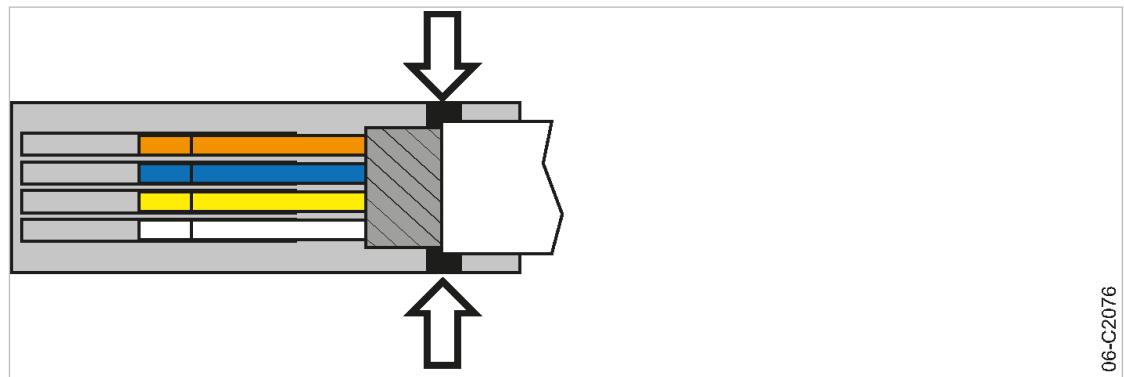

Fig. 6 Positioning the network cable

4. Position the network cable as shown (arrows, see Fig. 6).

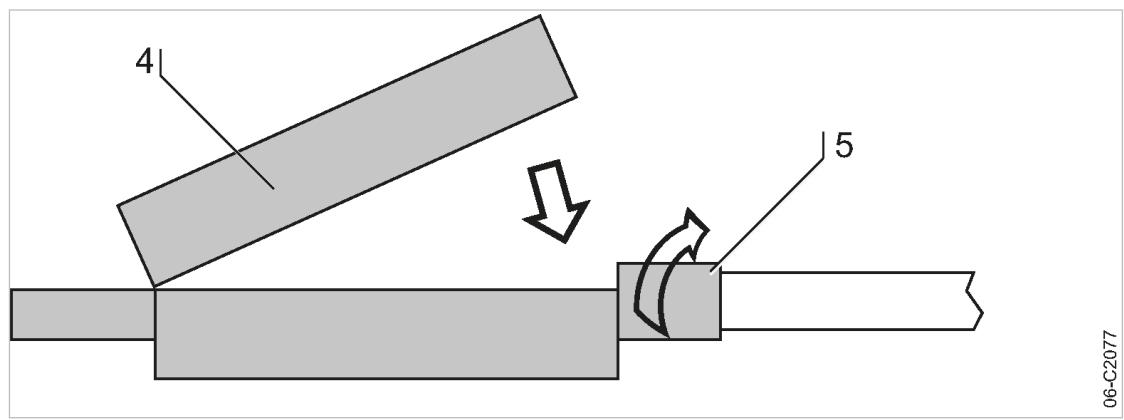

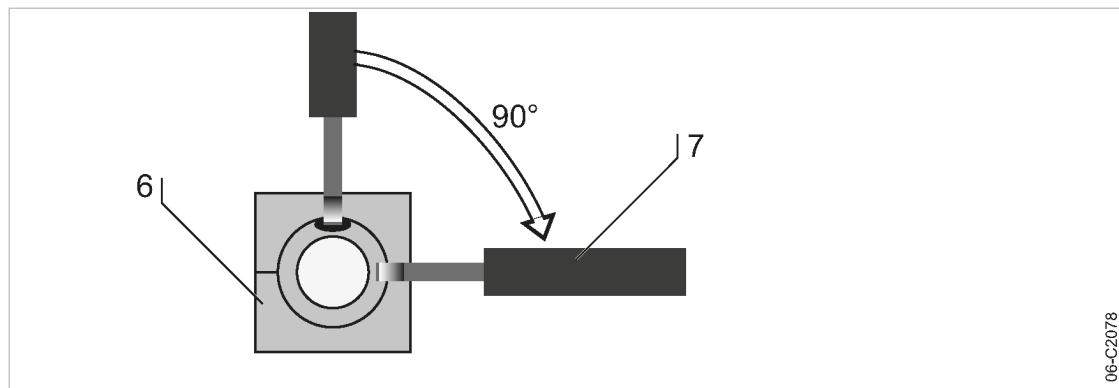

Fig. 7 Close the lid of the RJ45 plug

- ④ RJ45 plug lid
- ⑤ Rotatable locking piece

5. Close the lid and manually rotate the locking piece clockwise as far as possible.

06-C2078

Fig. 8 Rotating the locking piece to the stop

- ⑥ RJ45 plug (view from cable end)
⑦ Screwdriver

6. Insert a screwdriver with 0.1 in. blade width into the bore and rotate the locking piece clockwise up to the end stop.

Contact issues with conductor ends after multiple contact is created.

- Cut off contacted conductor ends and again strip the conductors.

The insulation displacement contacts of the plug may be disconnected and re-contacted up to 10 times.

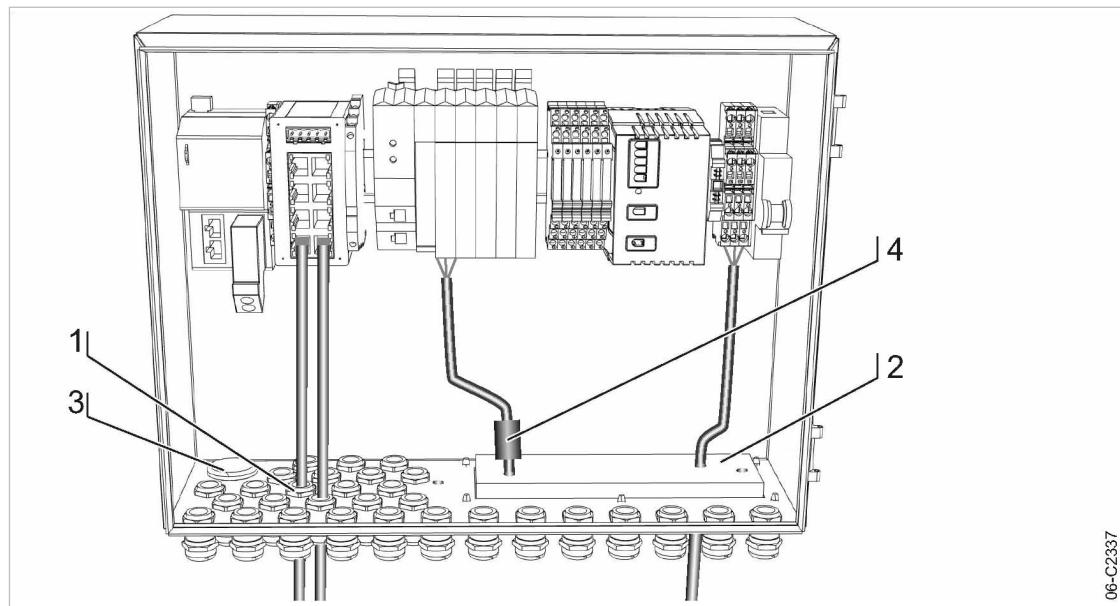

Result The plug is correctly locked when the opening of the locking piece is facing sideways and the side surfaces are flush with the plug.

6.9 Connecting lines

6.9.1 Wiring the control cabinet

- Precondition** The control cabinet is properly attached to the wall as described in chapter 6.4.
The base plate is freely accessible.
- Wire the control cabinet as described below.

6.9.2 Feeding cables and connecting the screening

06-22337

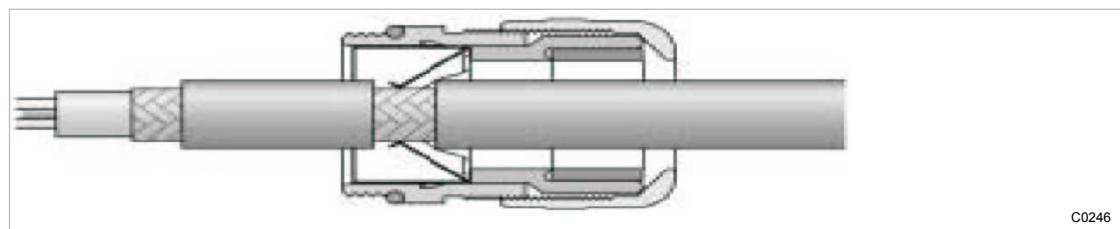

Fig. 9 Feeding cables

- | | | | |
|---|--|---|--|
| ① | Metal screw fitting for screened conductors (analogue inputs and outputs, SIGMA NETWORK, PROFIBUS) | ③ | Plastic cable glands for fibre-optic conductors. |
| ② | Plastic cable glands for unscreened cables (common supply line, equipotential bonding, digital inputs and outputs) | ④ | Ferrite for digital inputs |

1. Feed the screened conductors through the metal screw fittings ①. Connect the screening as described below.
2. Feed the unscreened conductors through the plastic cable glands ②.
3. Feed the fibre-optic conductor through the plastic cable gland ③.
4. After feeding the conductor, rotate each cable gland until the conductor is properly seated and the gland is sealed.

Connecting the screening

At the control cabinet:

C0246

Fig. 10 Connecting the screening

1. Strip off the cable insulation by about 1 cm where the cable passes through the cable gland.
2. Push the cable through the metal cable gland on the control cabinet until the stripped section snaps in and contacts the earth clamp in the cable gland.

6.9.2.1 Attaching the ferrite sleeves

Ferrite sleeves may touch each other.

Ferrite sleeves may be placed on the plastic gland plate **②** or fastened to the cable at any location.

- Feed the conductors for digital inputs through one of the loosely-supplied ferrite sleeves **④**.

6.9.3 Laying the cables in the control cabinet

1. Use cable ties to bundle conductors with voltages up to 24 VDC (digital inputs and outputs, analogue inputs and outputs, relay outputs, if provided).
2. Use cable ties to bundle bus conductors (SIGMA NETWORK, PROFIBUS).
3. Use cable ties to bundle conductors with 115/230 VAC (common supply line, relay outputs, if provided).

6.9.4 Connecting the cables

1. Make the connections to terminals and interfaces as detailed in the attached wiring diagram.
2. For installing the RJ45 bus connector, see chapter 6.8.
3. If applicable, install the PROFIBUS plug. See the operating instructions for SIGMA AIR MANAGER 4.0, chapter Installation.
4. See Chapter 8.2 for connecting the Ethernet extender.

7 Initial Start-up

7.1 Commissioning SBU 200

Precondition All installation activities and wiring tasks have been properly and completely performed according to chapter 6 "Installation"

1. Switch on the safety cut-out in the SBU.
2. Close the control cabinet.
3. Switch on the power supply disconnecting device for the SBU.

Result The control cabinet components of SBU start to run.

7.2 Commissioning SBU 400

For details regarding the commissioning of SBU, please refer to the operating instructions for SIGMA AIR MANAGER 4.0 in chapter Initial Start-up.

8 Operation

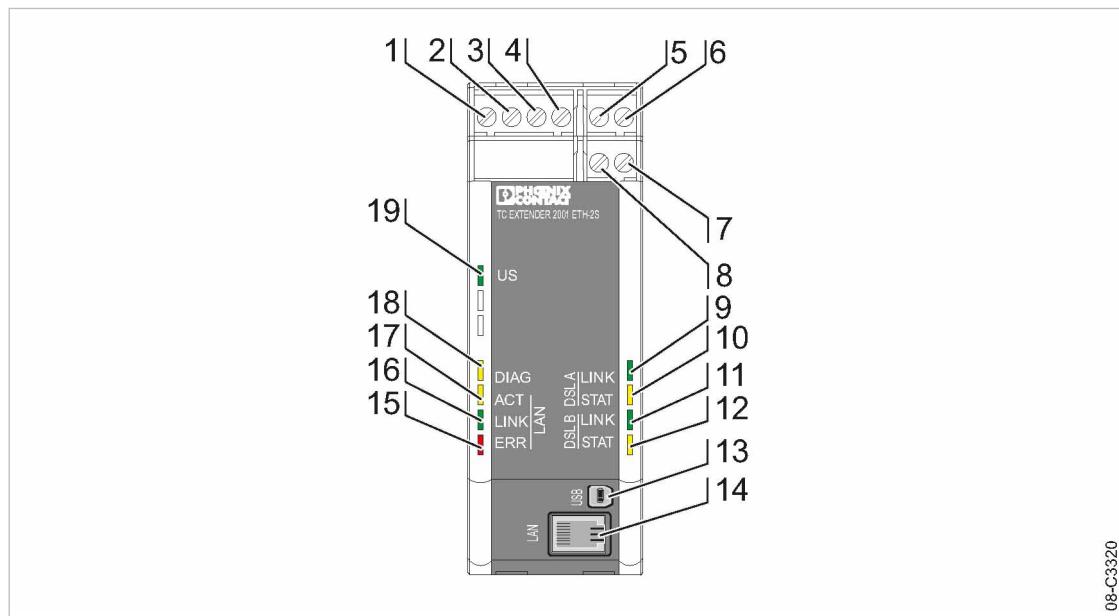

8.1 Operation SBU

For details regarding the operation of SBU, please refer to the operating instructions for SIGMA AIR MANAGER 4.0 in chapter Operation.

8.2 Display elements and interfaces of SBU with DSL

An Ethernet extender is included in converter SBU200-1 DSL. The indicator elements and interfaces are described below.

08-C3320

Fig. 11 Ethernet extender: Indicator elements and interfaces

Location	Description	Remark
①	24 V DC	Power supply
②	GND	
③	O1	Digital outputs
④	O2	
⑤	DSL port A, terminal (a)	First DSL port
⑥	DSL port A, terminal (b)	
⑦	DSL port B, terminal (b)	Second DSL port
⑧	DSL port B, terminal (a)	

Location	Description	Remark
[9]	LED LINK DSL A (green)	LED off: DSL port inactive LED flashes briefly (every 3 s): DSL port searches for link partner
[11]	LED LINK DSL B (green)	LED flashes (1 Hz): Link partner found LED flashes (2 Hz): Initialization of connection LED flashes (4 Hz): ERR on / STAT DSL off = installation error, e.g. line structure configured, but 4-wire point-to-point connection set up LED on: Connection active
[10]	LED STAT DSL A (yellow)	LED off: No active connection LED off (pulsating): (Flashes every 3 s) connection quality is sufficient
[12]	LED STAT DSL B (yellow)	LED on (pulsating): (Goes out every 3 s) connection quality is good LED on: Connection quality is very good
[13]	Mini-USB type B [USB]	USB interface for configuration and diagnostics
[14]	RJ45, [LAN]	Ethernet interface to connect to SIGMA NETWORK or LAN
[15]	LED ERR (red) [LAN]	LED flashes (2 Hz): Error during booting (US also flashes) LED on: Transmission error / installation error
[16]	LED LINK (green) [LAN]	LED on: Connection active
[17]	LED ACT (yellow) [LAN]	LED on: Data traffic active
[18]	LED DIAG (yellow) [LAN]	LED off: no major errors LED flashes (1 Hz): (Duration: 20 s after booting) device has been set to factory configuration LED flashes (2 Hz): Remote access from a different extender (data transmission during remote configuration, remote diagnostics, firmware update) LED on: major error - reading diagnostic data is recommended
[19]	LED US (green)	LED on: Power supply OK LED flashes (1 Hz): Feed via USB (only for configuration) LED flashes (2 Hz): Error during booting (ERR also flashes)

Tab. 24 Ethernet extender: Indicator elements and interfaces

9 Fault Recognition and Rectification

9.1 Faults and troubleshooting

For details regarding the fault detection and troubleshooting of SBU, please refer to the operating instructions for SIGMA AIR MANAGER 4.0 in chapter Fault Recognition and Rectification.

Please see chapter 8.2 for details regarding the fault detection and troubleshooting for the Ethernet extender of a SBU with DSL.

10 Spares, Operating Materials, Service

10.1 Note the nameplate

The nameplate contains all information to identify this product. This information is essential to us in order to provide you with optimal service.

- Please give the information from the nameplate with every enquiry and when ordering spare parts (see chapter 2.1).

11 Decommissioning, Storage and Transport

11.1 De-commissioning

De-commissioning is necessary, for example, under the following circumstances:

- SBU is temporarily not needed.
- SBU is to be moved to another location.

1. Isolate SBU (power supply disconnecting device) from all power phases .
2. Switch off external power sources.
3. Disconnect SBU from all connections when the device is to be moved to another location.

11.2 Disposal

Precondition SBU is de-commissioned.

1. Disconnect SBU from all connections.
2. Hand the SBU over to an authorized disposal expert.

12 Annex

12.1 Anchor holes for the control cabinet

volt-free contacts
User's connection

max. 250V AC / 3A, 24V DC / 1A
suppress inductive loads - See service manual

For Field Wiring:
Use Copper Conductors Only!
Conductor max. 16AWG
Connect Control Device Only!

Keep separate from class 2 control circuits.
